

D.J.J.S.

Summary Risk Assessment

Based on readily available socio-economic data drawn from a variety of sources including D.J.J.S., C.C.S.D., D.F.S., and the U.S. Census Bureau, this Summary Risk Assessment chart was composed encompassing overlapping variables, i.e., juvenile arrests, attendance and dropout rates, abuse and neglect referrals, and economic levels, to aid in the identification of the most at-risk youths in Las Vegas, representing the greatest opportunities for D.J.J.S. prevention and intervention investments and programs.
